Software Development Capabilities and Services

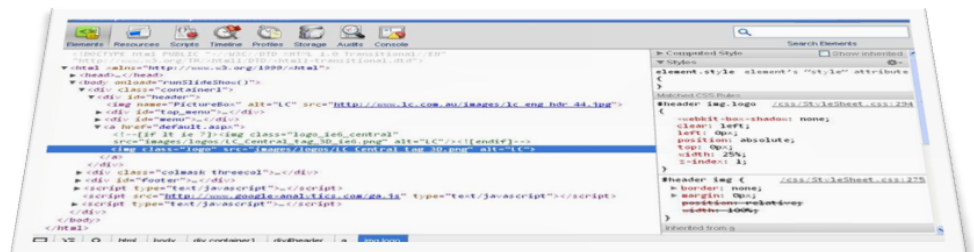

LC has built up significant, real world experience, staff and expertise in IT systems and processes. Considerable history and experience of current staff in dispensing consulting advice in successful projects in the mining, legal, finance, and banking industries has resulted in a proven pragmatic approach to creating IT systems that are, above all, reliable and enduring, serving the stakeholders for years, rather than short term projects, overly influenced by IT fashions, fads or trends.

Our core expertise includes:

- Enterprise class database design, build and maintenance (SQL92, MS SQL Server)
- User friendly browser and web based interfaces to databases (ASP.NET)
- Web based reporting systems linked to SQL Server (ASP.NET, SSRS)
- Remote data logging, state recognition, data download, reporting and messaging
- Workflow and alerting systems
- Process management, critical path and timeline reports
- Scientific data analysis, graphing, reporting
- Win32 code development (C, C++ C#, VB.NET)
- Real time systems and control
- Accounting, CRM, ERP software integration and/or data interfacing
- Resources, timesheets, project and cost management systems
- Legacy database upgrades and troubleshooting
- Performance audits and code reform. (MS Access to SQL Server)
- Large data import/export or migration, bulk copies or transfers
- Integration of data systems with third party services, data stores

We can provide software development
capability and services to your resource pool.
