Corporate Profile

Company summary

LC, formerly known as Leslie Consulting, is a mechanical engineering company providing complete engineering solutions to a variety of clients in both government and industry sectors.

With significant industry experience gained over 21 years, LC offers **4 elements** of expertise:

- Engineering & Design
- Consulting Services
- Products
- Energy Services

The principle of our business is to provide direct professional, and independent engineering assessments and analyses, designs and products as well as relevant support services.

The development of products having a wide commercial application form part of the engineering goals of the company. In particular, LC's development and commercialisation of structural monitoring systems are at the forefront of data acquisition technology and fatigue cycle analysis.

Located in Brisbane (head office), Mackay, Dalby and Johannesburg, LC is a medium-sized enterprise with professional engineering staff operating under the guidance of Engineers Australia.

LC has strong presence in mining, mineral resources and the mechanical engineering industries in general.

Innovation is at the forefront of our company's capabilities. Strong foundations in personnel, culture and engineering expertise with an excellent safety track record all provide for excellent future prospects.
